Camrosa Water District is a special district covering 31 square miles in southeastern Ventura County, including eastern Camarillo, California State University Channel Islands, and the Santa Rosa Valley. The District serves a variety of customer types, from agricultural to residential to light industrial, via approximately 10,000 potable and 400 non-potable connections. In addition to providing potable water, Camrosa collects and treats wastewater and produces recycled water at its Water Reclamation Facility, and recently completed constructing a brackish water desalination facility. We have a lean, cooperative workforce that provides exposure to all aspects of water production, treatment, distribution and collection, and the opportunity for employees to, over the long term, influence their career path.

The Water Reclamation Facility is an extended aeration plant that produces Title-22 tertiary treated recycled water, which Camrosa delivers to California State University—Channel Islands and a handful of local farmers for irrigation. The plant is currently rated at 1.5 MGD; Camrosa is in the process of rerating it to 2.25 MGD.

**RESPONSIBILITIES:** This position requires Grade 3 or higher Wastewater Treatment Plant Operator certification. The Operator will perform skilled work in the operation and maintenance of wastewater/water plant systems. Plant operations duties include: operation, monitoring, control, troubleshooting, and improvement of wastewater/water pump, treatment, and lift station facilities and associated SCADA equipment; collection, processing and chemical analysis of wastewater/water samples for plant function and compliance testing; receipt and storage of chemicals and other hazardous materials; performance of preventative maintenance and the repair (including minor plumbing) of all related plant process equipment including pumps, motors, chlorinators, chemical feeds, and basic laboratory instruments to ensure treated wastewater meets all regulatory compliance. The Operator will assist the Superintendent of Operations in preparing wastewater-related reporting, will be placed in the on-call rotation with other district operators, and must be able to operate heavy equipment. There is opportunity for professional growth and the expansion of duties.

This position requires the ability to work independently under limited supervision, and establish and maintain working relationships with customers, management and coworkers.
